Professional Summary

Python Full Stack Developer with 7 month of experience building scalable web applications using Django, React, and RESTful APIs. Skilled in designing responsive UI, optimizing backend performance, and managing end-to-end full-stack development for 100+ users. Adept at integrating modern DevOps tools and implementing secure authentication and payment workflows.

Skills

Backend Development: Python, Django, Django REST Framework, Flask, REST API, GraphQL, JWT Authentication
Frontend Development: HTML5, CSS3, JavaScript, React, Redux, Tailwind CSS, Bootstrap
Databases & ORM: PostgreSQL, SQLite, Django ORM
DevOps & Tools: Docker, Git, GitHub Actions, Postman, Celery, RabbitMQ, Nginx
Architecture & Design: Clean Architecture, MVC, Microservices, Monolithic Architecture, RESTful Design

Experience

Python Full Stack Developer | Bridgeon Solutions LLP   *Jan 2025 – Present*

- Engineered and integrated 100+ **RESTful APIs** using Django REST Framework, consumed via Axios in React for dynamic product listings, authentication, cart, and wishlist functionalities.

- Built 50+ responsive frontend components using React and Tailwind CSS, improving page load times and cross-device performance by 30%.

- Designed and implemented full checkout and payment flows with real-time calculations and multi-option payment selection, successfully processing 300+ orders.

- Oversaw **Git** workflows with 150+ commits, feature branching, and code reviews, ensuring efficient team collaboration.

- Coordinated end-to-end integration between React frontend and Django backend, delivering robust and maintainable full-stack solutions.

Projects

Bull Wheel – E-Commerce Website | Python, Django, React, Tailwind CSS, JSON Server, Axios

- Constructed a fully responsive e-commerce platform for alloy wheels, optimized for mobile, tablet, and desktop devices, increasing user engagement by 30%.

- Implemented dynamic product listing, wishlist, cart, and checkout flows with per-user state management using Django REST APIs and Axios.

- Developed secure role-based dashboards for 1,000+ users with proper access control for customers and admin roles.

- Created an admin panel for real-time product, order, and user management, including CRUD operations and sales analytics dashboards.

- Executed 300+ test orders to validate reliability, error handling, and payment correctness.

- Integrated real-time frontend updates for cart and wishlist changes, improving user experience and reducing page reloads.

My Portfolio – Local Service Finder | React, Redux, Tailwind CSS, EmailJS, TypeScript

- Built a frontend-only platform to search, filter, and book 100+ nearby service workers efficiently based on service type, ratings, and distance.

- Designed responsive worker and client interfaces with 5+ forms for profile creation, service listing, booking, and feedback collection.

- Developed chat and video call UI components simulating real-time communication, enhancing interactivity and engagement.

- Managed application state using Redux for 200+ mock worker/client records, ensuring smooth data flow and accurate real-time updates.
